Preliminary 2012 World Airport Traffic and Rankings

ACI preliminary traffic results, based on reports from over 1093 airports worldwide, indicate that global passenger traffic grew at a rate of 4 percent while cargo and aircraft movements were flat as compared to 2011.

Global passenger traffic has remained resilient in the face of global uncertainties and downside risks that plagued the global economy throughout 2012. While airports in the developed economies of Europe and North America experienced only modest gains in passenger traffic, with year-over-year growth of +1.7 and +1.2 percent respectively, air transport markets in emerging economies continue to show buoyant activity. As many as five airports in emerging markets with over 40 million passengers reported double-digit growth rates.

These airports include Istanbul (IST; +20.6), Dubai (DXB; +13.2), Jakarta (CGK; +12.1), Bangkok (BKK; +10.6) and Singapore (SIN; +10.0).
